DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

For the active agent:

- Any one of the 7 compounds of claim 3;
- Any one of the 4 compounds of claim 4; and
- A fully disclosed compound of claims 5-9 naming all variables.

For the penetrant:

- A fully disclosed penetrant of claims 10-19.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election. Thus, Applicant must select a fully disclosed compound from claims 3-9 and a fully disclosed penetrant for examination on the merits. A response will be held non-responsive if only one or the other is selected.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

The claims which have the species are detailed above.

The following claim(s) are generic: 1, 2 and 20-25. Please note that 'use' claims are not a proper statutory class of invention and will be rejected under 101 and 112 second paragraph unless the claims are amended to conform to US practice.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: a suspension concentrate of an herbicidally active compound in oil with one or more nonionic surfactants including terminally etherified ethoxylated aliphatic alcohols is already taught in claims 1-15 of Sixl (US 6479432) and anticipates at least instant claim 1. Since the special technical feature, the instant oil based suspension concentrate with penetrant, appears to be already known in the art, then Unity of Invention does not exist and restriction is deemed proper.

A telephone call was made to Cynthia Bouchez on 2/28/10 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
